

Building to Building Links

Airband are able to provide building to building wireless connections designed for data and voice traffic. These services are an ideal solution for companies who require greater bandwidth or more reliability in their network connections. These services are a lower cost option and provide greater flexibility than traditional fibre or copper services.

How does it work?

We install, manage and monitor a wireless data link between your offices.

Installation and setup is simple with our engineers fitting the appropriate wireless radios on your current buildings. In some circumstances licensing may be required but we will deal with this issue on your behalf.

Typical bandwidths available are between 10Mbps—1.25Gbs.

We can also provide these services where there is no direct line of sight between your offices, or your offices are situated up to 100Km distance. We do this via ours or third party high sites.

Please call us on 0800 035 0025 to discuss your requirements or email us at office@air-band.co.uk. With no obligation we will give you estimates on cost for your own network, costs only being introduced when you wish to take it to the next stage.

Current Customers:

Aston Martin cars

Hereford county council

Npower

Take advantage of our current offer:

50Mbps

fully serviced for 3 years:

£1250 + VAT

For buildings within line of sight of each other.
